## Expectatiom and variance of the probitmodel

Expectation 
$$f(\mu, \sigma) = \int_{-\infty}^{\infty} \Phi(y) N(y \mid \mu, \sigma^2) dy$$

```
\begin{split} &\text{fa}[\mu_-,\,\sigma_-] := \text{NIntegrate}[\\ &\quad \text{CDF}[\text{NormalDistribution}[],\,\mathbf{y}] \, \text{PDF}[\text{NormalDistribution}[\mu,\,\sigma],\,\mathbf{y}],\,\{\mathbf{y},\,-\infty,\,\infty\}] \\ &\text{fa}[\\ &\quad -0.1,\\ &\quad 0.5]\\ &\quad 0.464365 \end{split} &\mathbf{f}[\mu_-,\,\sigma_-] := \text{CDF}[\text{NormalDistribution}[0,\,\sqrt{1+\sigma^2}\,],\,\mu] \\ &\mathbf{f}[-0.1,\,0.5]\\ &\quad 0.464365 \end{split}
```

## Varianceg $(\mu, \sigma) = \int_{-\infty}^{\infty} \Phi^2(y) N(y \mid \mu, \sigma^2) dy$

```
 \begin{split} & \text{ga}[\mu_-,\,\sigma_-] := \text{NIntegrate} \big[ \\ & \quad \text{CDF}[\text{NormalDistribution}[],\,y]^2 \, \text{PDF}[\text{NormalDistribution}[\mu,\,\sigma],\,y],\,\{y,\,-\infty,\,\infty\} \big] \\ & \text{ga}[\\ & \quad -0.1,\\ & \quad 0.5] \\ & \quad 0.247449 \\ & \quad \Sigma[\sigma_-] := \big\{ \big\{ 1 + \sigma^2,\,\sigma^2 \big\},\, \big\{ \sigma^2,\, 1 + \sigma^2 \big\} \big\} \\ & \quad \text{g}[\mu_-,\,\sigma_-] := \text{CDF}[\text{MultinormalDistribution}[\{0,\,0\},\,\Sigma[\sigma]],\,\{\mu,\,\mu\}] \\ & \quad \text{g}[-0.1,\,0.5] \\ & \quad 0.247449 \\ & \quad \Sigma[0.5] \, \text{// MatrixForm} \\ & \quad \left( \begin{array}{ccc} 1.25 & 0.25 \\ 0.25 & 1.25 \end{array} \right) \end{split}
```
